# Addon Domains

The image shows the cPanel dashboard. On the left, there is a sidebar with icons for various tools. The main area is divided into sections. The top section is 'SEO AND MARKETING TOOLS' with options like 'Get In Google', 'SEO Tips', 'SEO Tools', and 'Google Website Services'. Below that is the 'DOMAINS' section, which contains three options: 'Addon Domains' (highlighted with a red box), 'Subdomains', and 'Advanced Zone Editor'.

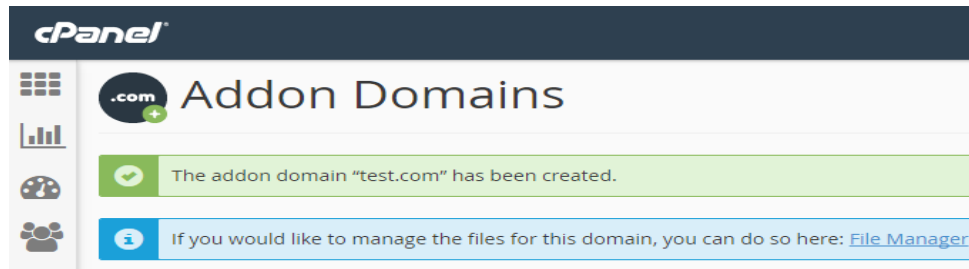

The image shows the 'Add Domain' form in cPanel. The title is 'Add Domain' with a '.com' icon. Below the title is a sub-header 'Create an Addon Domain' and a brief explanation: 'An addon domain is an additional domain that is stored as a subdomain of your main site. Use addon domains information, read the [documentation](#).' The form has three main input fields: 'New Domain Name' (containing 'test.com'), 'Subdomain' (containing 'test'), and 'Document Root' (containing 'public\_html/test.com'). There is also a checkbox for 'Create an FTP account associated with this Addon Domain.' and a blue 'Add Domain' button at the bottom.

Enter the Domain Name and Click on Add Domain

To add more domains on this package, click on Addon Domains in the cPanel

The image shows the cPanel dashboard after the domain has been created. The title is 'Add Domain' with a '.com' icon. Below the title is a green success message: 'The addon domain "test.com" has been created.' Below that is a blue information message: 'If you would like to manage the files for this domain, you can do so here: [File Manager](#)'.

Addon Domain is Created

Here, you would find the list of Name Servers you need to set for your domain name

Point your Domain Name to your Hosting package using one of the options below.

Option 1: Configure your Domain Name to use our Name Servers (Recommended):

- ns1.bh-2.webhostbox.net
- ns2.bh-2.webhostbox.net

OR

Option 2: Add the following records to your Domain Name's existing Name Servers

mukhtadir.in	IN	A	208.91.198.106
*.mukhtadir.in	IN	A	208.91.198.106
www.mukhtadir.in	IN	A	208.91.198.106
mukhtadir.in	IN	MX	mukhtadir.in

Alternatively, if you wish to retain the Name Servers of your domain name instead of using ResellerClub's Name Servers, you would need to add the DNS Records listed on this page, on your existing Name Servers.

# That's It!

You are now all set to Kick-Start your **Web Hosting Business**
